

## Star Jets

A truly unique jet that allows the bather to adjust both the water and air flow to the desired massage level. It also allows the flow direction to be set by moving the eyeball. It's easy to clean and can be replaced inside the tub without special tools.

## Colors Of Trim

All Mini Jets, Star Jets, Vari-Flo, Silent Air Control and all suction covers are available in chrome, polished brass and most current plumbing fixture colors.

## Dial-Flo

An optional feature on the whirlpool tub that allows the bather to control the pump for a gentle, medium or vigorous massage action. Easy to adjust by turning the control at the top of the tub deck. No expensive electronic replacement cost.

## Silent Air Control

A standard feature that greatly reduces the whistles and hisses of the whirlpool system. The silent air control has a low profile and is serviceable from the top of the tub. It comes in chrome and polished brass plus most current plumbing fixture colors.

## In-line Heaters

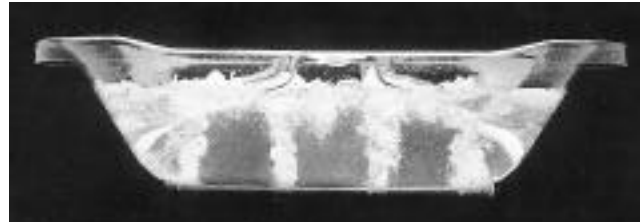

A heater allows the bather to maintain water temperature without adding hot water and draining cold. It features: stainless steel housing, 1500 watts at 120 volt, double dry fire protection, built-in reset switch (switch that turns heater on/off), built-in thermostat, quick disconnect connectors (for possible maintenance) and meets UL 1795.

A non-electric heater for those that want to add heat to the water from the pump motor. The Heat Flow is not adjustable. There are no moving parts or electrical connections. The Heat Flow is UL recognized.

## Air Bubbler

The air bubbler is a sanitary system of air-only jets that provide the ultimate in therapy, relaxation and hygiene. Small bubbles of air burst forth from individual air jets placed on the bottom of the tub to infuse the water with an effervescent, sensuous cloud of bubbles. The system can be used alone or with the traditional whirlpool to create a super system offering all the possibilities of hydrotherapy. It has a low noise level. The unit is UL recognized and is fitted with a removable and cleanable inlet filter.

## Mini Jet

The mini jet can be used in all the whirlpool tubs. It has the following features:

1. Low profile
2. Adjustable flow direction
3. Replaceable inside the tub without special tools
